COURSEWORK

M.S. Computer Science, New York University

Incoming Fall '26

Non-degree seeking graduate coursework, Johns Hopkins

(Part-time) 2 Years

Theory of Machine Learning, Monte Carlo Methods, Electromagnetics, Fluid Dynamics, Plasma Physics

B.S. Computer Engineering, Georgia Tech

(Full-time) 2 Years

GPA: 4.0. Object-Oriented Prog., Discrete Math, Design & Analysis of Algos, Comp. Architecture, Networking

B.S. Applied Math and Stats, Emory University

(Full-time) 3 Years

GPA: 3.9. Minor in Economics. PDEs, Numerical Analysis, Computational Modeling, Linear Optimization

WORK EXPERIENCE

Software Engineer, Metron

(Full-time) 3 Years

Metron builds software grounded in applied math research for the Defense and Intelligence Community

- Core developer on TRK, the Navy's premier data fusion and tracking tool for anti-submarine warfare
- Implemented forward-backward particle smoothing feature in TRK, from algorithm to data visualization
- Lead engineer on ONR project to jointly estimate target state and low-rank environment parameters. Utilized ensemble MCMC sampling and built a neural net surrogate of an acoustic ray-trace simulation
- Organized a particle filter literature review group and a book club for Bishop's *Deep Learning* textbook

Data Science Intern, Equifax

(Full-time) 3 Months

- Built and automated end-to-end training pipeline for random forest classifier of U.S. households in R/SQL

Wealth and Investment Management Intern, Wells Fargo

(Full-time) 3 Months

- Researched six public equities and built discounted cash flow valuations to support portfolio composition

Tutor, Emory University

(Part-time) 1.5 Years

- Tutored Emory undergraduates in linear algebra and logic (philosophy) in 50 minute, 1-on-1 sessions

OTHER EXPERIENCE

Applied Math/Epidemiology Research, Emory University

(Part-time) 6 Months

- Expanded a standard "Susceptible-Infected-Recovered" (SIR) system of differential equations to include the effects of drug/vaccine deployment and modeled them in Python. Led team of four undergraduates.
- Published "*SIR Model of Time-Dependent Drug and Vaccine Distribution on COVID-19*" in SIURO

Data Science Consultant, ERASE Child Trafficking

(Part-time) 1 Month

- Placed first in an Emory data science competition to help grow ERASE's Facebook outreach
- Built Linear Regression and Random Forest models on 2500 posts in Python to predict successful posts. Presented a 10-minute summary to ERASE leadership on how to increase engagement

ADDITIONAL INFORMATION

Skills: Java, Python, Linux, OpenGL, Protobuf/gRPC, Guice, Concurrent/Parallel programming in Java

Awards: Tau Beta Pi, IEEE Eta Kappa Nu, OΔE Economics Honor Society, Emory Dean's List, Eagle Scout

Hobbies: Tennis, Squash, Running, Rock Climbing, Skiing, Backpacking, Hiking: summited 12 14,000 ft peaks
